

MAVEN

HOSPITALITY OS

The Operating System for Restaurants, Hotels & Cafes

A single, unified platform that consolidates your brand marketing, organic content creation, local search engine optimization, customer CRM, loyalty engine, table QR digital menus, point of sale operations, and real-time inventory tracking. We replace up to five fragmented vendor subscriptions and agencies with one high-performing operating system, served under a single flat-fee rate of ¹29,999/month. Completely commission-free.

SYSTEM BRIEF & PARAMETERS

- Flat Subscription: INR 29,999/month (No contract)
- Direct Support: 24/7 Automated Webhook & API Monitoring
- 0% Commissions: Free table QR order checkout loops
- Deployment Window: Completed in 14 days maximum
- Included Hardware Integrations: POS & Kitchen Display Systems

The 8 Core Services

INTEGRATED MARKETING & OPERATIONAL MODULES

Maven consolidates all required guest-acquisition channels, automated communications, and operations dashboards into a single, cohesive unit. This eliminates the massive administrative friction, high payroll overhead, and data gaps of managing separate agencies and SaaS portals.

01. Meta Ads (Paid Social)

DRIVE CONVERSIONS & FOOTFALL

Hyper-local geofenced Facebook and Instagram ad campaigns. We map a strict radius around your locations, direct high-intent local foodies directly to bookings or private QR checkouts, design aesthetic video ads, and handle optimization continuously.

02. Organic Content Creation

BRAND IDENTITY & SOCIAL INTEGRITY

A complete custom social media calendar written in your exact brand voice. Includes cinematic Instagram Reels scripts, visual feed layout grids, custom high-engagement story sequences, and daily cross-posting to Google Maps.

03. Local SEO Optimization

RANK #1 ON GOOGLE SEARCH

We place your brand at the absolute peak of Google Maps results for local search terms (e.g. "italian restaurant near me"). Includes citation building, review generation automation, schema injection, and search profile maintenance.

04. WhatsApp Cloud Automation

OFFICIAL API CONCIERGE 24/7

Meta's native Cloud API integrated into your reservation loops. Guests receive instant table availability answers, booking updates, abandoned checkouts recovery, and opt-in newsletters. Zero third-party platform middleman fees.

05. Customer CRM & Loyalty

MAXIMIZE LIFETIME VALUE

We log guest history, preferences, average ticket spend, and visit frequencies. The CRM automatically triggers anniversary discounts, personalized WhatsApp campaigns, and automated win-back voucher codes if a guest lapses for 30 days.

06. QR Menus & Table Ordering

0% COMMISSIONS DIRECT ORDERS

Frictionless table-side digital menus designed to match your restaurant aesthetic. Diners scan and browse high-resolution dishes with allergen markers, order, request waiters, or pay. No app downloads required.

07. POS & Inventory (Free Package)

WORTH INR 5,000/MO - INCLUDED FREE

Full enterprise front-of-house billing, recipe costing charts, role-based staff log-ins, cashier drawer verification, and back-of-house stock tracking. Fully integrated with your table-side QR orders and WhatsApp concierge.

08. Managed Custom Web Portal

SECURE, HIGH-SPEED STATIC HUBS

A premium, custom website designed, developed, and managed by our core engineering team. Hosted on lightning-fast CDN nodes, fully secure SSL, and optimized for instant keyword indexing.

Engineering Architecture

SYSTEM PROTOCOLS, REAL-TIME PIPELINES & DATA FLOW

■ Edge Runtime Infrastructure

Our applications run on Vercel's Edge Network. Next.js serverless functions render content from geographically close nodes, yielding sub-50ms Time-to-First-Byte (TTFB) and ensuring zero downtime even during massive traffic spikes.

■ Type-Safe Core API Protocol

We utilize a tRPC API protocol which bridges the frontend and Express backend. This guarantees 100% compile-time type-safety across shared packages, completely preventing interface mismatches, broken APIs, and silent runtime crashes.

■ Real-Time Server-Sent Events (SSE)

Unidirectional, persistent TCP streams push changes instantly. When a guest scans a QR code and places an order, the Express backend broadcasts the payload to the cashier terminal and Kitchen Display System (KDS) under 100ms. No database-heavy polling required.

■ Database Schema Isolation & Security

Our database uses Prisma and Prisma Better-SQLite3 adapters. The system is designed with rigorous multi-tenant data boundaries, guaranteeing that customer CRM records, reservation ledgers, and transaction credentials are securely isolated.

SPOTLIGHT: RECIPE-LEVEL INVENTORY DECREMENT ENGINE

Unlike basic POS software that only tracks overall product sales, Maven runs an active relational recipe matrix linked directly to your digital inventory sheets. Every checkout triggers an atomic transaction that resolves recipes to their exact raw units:

- 1x Truffle Tagliolini -> Auto-decrements 6g imported truffle, 120g artisanal flour, and 1 egg.
- 1x Burrata Salad -> Auto-decrements 1 unit of fresh burrata and 80g of heirloom cherry tomatoes.

If any raw ingredient stock hits a pre-configured buffer threshold (e.g. Truffles remaining: < 50g), the system immediately halts orders for that item, displays a warning on the cashier monitor, and triggers an automated low-stock WhatsApp alert to the kitchen supervisor.

Economic ROI Ledger

COST LEAKAGE AUDIT & FINANCIAL INTEGRATION OPTIONS

A high-end restaurant with a monthly online delivery and table ordering volume of ₹5,00,000 typically loses significant profit margins to aggregator commission structures, external creative retainers, billing POS softwares, and messaging services. We bundle this entire operational workflow into a single flat subscription, plugging leakage instantly.

EXPENSE CATEGORY	THE FRAGMENTED WAY	THE MAVEN WAY
Aggregator Commissions (10% - 15%)	₹1,00,000 / month	
Creative & Meta Social Agency Fee	₹25,000 / month	Included Flat in Retainer
Billing & POS Subscription (Prepaid/Postpaid)	₹1,000 / month	
WhatsApp API & Broadcast SaaS (WATI/Interakt)	₹5,000 / month	Included Flat
Managed Web Hosting & Support (GSL/Cloud)	₹1,000 / month	
ESTIMATED MONTHLY TOTAL	₹1,36,000 / month	₹29,999 / month

Guaranteed Bottom-Line Impact

By shifting reservation acquisition to social media channels, routing customer bookings via WhatsApp Cloud, and serving digital digital table QR ordering natively, Maven completely plugs revenue leaks. You retain 100% of your order volume margins, resulting in an estimated INR 12.7 Lakhs in newly recaptured annual profits.

₹1,06,001 / month saved

Simple, Flat Contract-Free Packages

THE BASIC OS (Marketing focus) ₹19,999/mo flat rate Includes core Meta Ads, organic Instagram management, 5 reels script designs, and local SEO citation generation. Designed for brands that already have a dedicated billing system but require robust local customer acquisition.	THE FULL ENTERPRISE OS (Recommended) ₹29,999/mo flat rate All 8 Services included. Meta Ads, content management, WhatsApp Cloud API concierge, customer CRM, table QR menu flows, recipe-level Point of Sale software, kitchen display system support, and custom web portals. Completely contract-free.

Lifecycle & FAQs

THE GUEST JOURNEY PIPELINE & SYSTEM DEPLOYMENT ROADMAP

The 8-Step Guest Lifecycle

1. Discover: Geofenced Ads & local SEO find guests.
2. Engagement: WhatsApp Cloud Auto answers bookings.
3. Scan: Table QR code displays beautiful dynamic menus.
4. Checkout: Frictionless table-side digital orders flow.
5. Processing: Instant billing syncs KDS in kitchen.
6. Inventory: Stock logs recipes & decrements.
7. Database: CRM logs history, averages, profiles.
8. Return: automated anniversary loops re-engage VIPs.

14-Day Onboarding Roadmap

- Days 1-3: Marketing Audit & Asset Capture
- Days 4-7: WhatsApp API Setup & Menu Translation
- Days 8-11: POS Inventory Setup & Table QR Prints
- Days 12-13: Meta Campaign Dev & Server Integration
- Day 14: System Live Operations!

Frequently Asked Questions

- Q: Do I need to buy expensive billing hardware?**
- A: No. The Maven Point of Sale runs natively on standard tablets, iPads, PCs, and web browsers. There is zero hardware lock-in. You can use your existing thermal printers and hardware routers.
- Q: Can I keep my existing Petpooja or POSist billing?**
- A: Absolutely. If you are already locked into a POS subscription and only require our marketing, SEO, and WhatsApp automation modules, you can opt for our Basic OS tier.

- Q: Are there hidden setup fees or long-term contracts?**
- A: None. Maven operates strictly under a month-to-month flat-rate subscription. You can upgrade, downgrade, or cancel at any time with a simple 30-day notice.
- Q: How do you prevent data leaks or service downtime?**
- A: Our systems use isolated Prisma-managed transactional SQLite databases for each brand. The landing and POS interfaces are served via Vercel Edge networks ensuring 99.9% uptime.

Deploy Your Custom System

Ready to consolidate your branding and tech stack while reclaiming your aggregator margins? Book your onboarding audit call with our core product engineering team today. We'll audit your current cost leakage and walk you through the custom portal features.
